SUMMARY

UI/UX Designer with 20+ projects and 90+ screens designed across SaaS dashboards, web apps, landing pages, and product interfaces. Experienced in user research, wireframing, prototyping, and design systems, with a UI/UX internship at Memolane where I turned user research into a prioritized feature plan and high-fidelity designs. Hands-on frontend skills (HTML, CSS, JavaScript) help me design interfaces that are practical to build and hand off to developers.

WORK EXPERIENCE

UI/UX Design Intern | Memolane (Neo Labs) | Apr 2026 – July 2026

- Researched 10–12 journaling apps and surveyed 20+ users, finding that most apps push premium access too early, then mapped the user journey and prioritized the feature list (streaks, mood tracking, reflection prompts, recall notifications).
- Designed wireframes, prototypes, and high-fidelity screens in Figma from concept to developer handoff, including a scoring feature based on the research findings.
- Established reusable UI patterns for visual consistency and collaborated with developers and stakeholders in design reviews.

PROJECTS

AI-Powered Amazon Creative SaaS — UI/UX Design | Figma

- Designed a 10-screen SaaS interface concept for an AI platform that helps Amazon sellers generate product creatives.
- Structured multi-step AI workflows into clear, scalable navigation and dashboards, translating a complex backend process into a simple user-facing experience.

Nova Chat — UI/UX Design | Figma

- Designed a 19-screen agent-side dashboard for a customer support chat app where AI handles first-line chats and hands off to human agents, adding AI labels to show which chats are handled by AI and which by agents.
- Introduced a Take Over Chat button so agents can step into AI-handled chats when answers fall short, and designed the escalation flow where a customer's agent request triggers a pop-up alert on the agent dashboard.

Employee Leave Management System — UI/UX Design | Figma

- Designed a dashboard for managing employee leave requests, records, and admin workflows.
- Built consistent UI patterns across 16 interconnected screens, reducing navigation friction for HR admins and employees.

Student Course Enrollment App — UI/UX Design | Figma

- Designed a 21-screen course enrollment app covering course listing with filters and sorting, course details with add to schedule and enroll actions, and a visual weekly timetable preview of selected courses.
- Designed conflict detection that highlights clashing courses and lets students resolve them by removing courses from their selection, followed by enrollment confirmation and success screens.

Personal Portfolio Websites — UI/UX Design & Frontend Development | Figma, Framer, HTML/CSS/JS

- Designed a portfolio in Figma and developed it with HTML, CSS, and JavaScript, including a working contact form (Formspree), responsive layouts across breakpoints, and Netlify deployment.
- Designed and built a second portfolio in Framer with a featured projects section, case-study pages, a skills section, and a contact form, presenting the same work in a different visual style.

30 JavaScript Projects Collection — Frontend Development | HTML, CSS, JavaScript, REST APIs

- Building 30 interactive JavaScript projects; 12 completed so far, including a weather app with API integration, expense tracker, notes app, QR code generator, and text-to-speech converter.

SKILLS

UI/UX Design: Figma, User Research, Wireframing, User Flows, Prototyping, Design Systems, Visual Hierarchy

Product Design: Information Architecture, Problem Solving, Stakeholder Collaboration, Developer Handoff

Frontend Development: HTML, CSS, JavaScript, REST APIs, Responsive Design, Git

Tools: Figma, Framer, GitHub, Netlify, Canva

Core: Design Thinking, Communication, Team Collaboration

EDUCATION

B.Tech – Computer Science | Lamrin Tech Skills University, Punjab | 2023 – Present

Intermediate (Science) | Patna Convent, Patna | 2023

Matriculation | St. Karen's Secondary School, Patna | 2021
